## SUMMARY

A frontend developer specializes in creating user-facing interfaces for websites and applications. They are proficient in languages such as HTML, CSS, and JavaScript, and often work closely with designers to implement visually appealing and functional designs. Their responsibilities include ensuring responsive design, optimizing performance, and integrating backend services. They play a crucial role in crafting engaging and intuitive user experiences.

## PROJECTS

### NEWS APP

Experience the latest in news with our dynamic React-powered app. Stay informed and engaged with personalized news feeds, real-time updates, and intuitive navigation. Whether it's breaking headlines or in-depth analysis, our app delivers comprehensive coverage across various topics. With a sleek and user-friendly interface, accessing the news has never been easier. Download now and stay ahead of the curve.

### WEATHER APP

Discover real-time weather updates with our JavaScript-powered app, leveraging third-party APIs. Simply search for any location to access detailed temperature readings and wind speed information. Our user-friendly interface ensures quick and accurate results, empowering you to plan your day effectively.

### EXPENSE MANAGER

Simplify your finances with our comprehensive expense manager. Track your spending, monitor your account balances, and categorize transactions effortlessly. Whether it's daily expenses, rent, or other bills, our intuitive interface provides clear insights into your financial health. With features like credit and debit balance tracking, managing your money has never been easier. Take control of your expenses and start budgeting smarter.
